

*BETWEEN THE NATURAL AND THE TECHNOLOGICAL,
THE ESSENTIAL AND THE CONTEMPORARY, A NEW
NARRATIVE FOR SPACE EMERGES.*

MONOLITHO

A new era of Decortiles' full-bodied porcelain tile

Monolitho translates the fusion of time, matter, and precision — a celebration of texture, form, and design as an expression of nature in its evolved state. It is the dialogue between origin and innovation, where matter renews itself without losing its essence.

From this vision, Decortiles develops a technology that redefines technical porcelain, integrating color, depth, and texture into a single body. The result is a continuous surface with impressive realism and superior performance — a milestone that consolidates the highest level of Brazilian ceramic technology.

Thus, time and technology meet, and stone transforms into language, form, and inspiration.

Technical porcelain has always been a reference in strength and performance. But Decortiles believes that true innovation arises when technique meets design.

From performance to sensory experience

If full-bodied porcelain tile was once synonymous with solidity, now it becomes a true sensory experience. With the ultra-realism of surfaces and pigments applied throughout the piece, Monolitho takes form as a single, cohesive piece. Its body gains visual depth, engaging textures, and nuances that evoke the uniqueness of natural stones.

Two new series featuring Monolitho technology are added to the Decortiles portfolio: Alkimia and Domos.

Alkimia emerges from the fusion of two natural stones — soapstone and limestone. Unique textures and striking shades lend character to environments, while materiality becomes a sensory experience. Alkimia is a balance between strength and delicacy, tradition and innovation.

In turn, Domos translates organic nuances into a robust, expressive, and contemplative surface. Its imposing graphic elements allude to the moon's rock formations, resulting in a subtle, timeless, and deeply architectural design.

Mineral solidity, timeless design

Inspired by the Greek "single stone," the name Monolitho conveys a familiar mineral essence. Each piece carries the monumentality of rock and the sophistication of a unique design. Thus, the synthesis of Monolitho emerges: combining the resistance of stone with the sensitive look of design and architecture.

A creative platform for architects

Designed to meet the technical and aesthetic requirements of architecture, the products with the technology are suitable for use in façades, countertops, furniture, and porcelain furnishings.

Its seamless form guarantees performance in high-foot-traffic environments, while its aesthetics push creative boundaries, and inspires new ways of designing.

With Monolitho, Decortiles ushers in a new era of full-bodied porcelain tile, featuring innovative surfaces that combine strength and design to create unique, next-level design pieces. By reconnecting with the essence, Monolitho drives technical evolution and elevates the creative potential of spaces.
